AL-KO brings ISOFIX to the motorhome

A new rear seat belt rack with a safe mounting for baby and children's seats and dog boxes

Düsseldorf/Kötz, August 2016

AL-KO Vehicle Technology, the leading supplier of safety systems for leisure vehicles, has also focused on passenger safety. For motorhome users travelling with their children, grandchildren or dog, the vehicle technology specialist from Kötz will present a new belt rack with ISOFIX for the rear seat of motorhomes at the Caravan Salon Düsseldorf. Baby and children's seats and even dog transport boxes can be safely, easily and quickly installed on this mounting, which has been used by most manufacturers in serial production in the car industry for many years. The light-build belt rack with an ISOFIX lug is only available for the vehicle makers from the 2017 model year. The device, which offers safety-conscious motorhome buyers peace of mind, will therefore soon be available as special equipment.

ISOFIX has already become the standard in the car area as a special mount for restraining systems for children and high-quality dog transport boxes. The ingenious novelty: the easily usable fastening does not require any safety belts in the vehicle itself or only uses such as additional fastening. The hugely reduces the risk of incorrect installation. Precisely because the link between car seat and body is rigid, permanent and extremely safe, the safety of infants and dogs is increased both in the car and in the motorhome.

The ISOFIX solution for the motorhome will be presented by AL-KO from 27 August to 4 September 2016 at the Caravan Salon in Düsseldorf (hall 13 at booth C45 1-2).
