

PRESS RELEASE

AL-KO presents its new RANGER caravan manoeuvring drive

Manually operated model for under EUR 1500 – Tandem variant available in 2017

Düsseldorf/Kötz, August 2016

World premier for the AL-KO RANGER: AL-KO Vehicle Technology presented its new caravan manoeuvring drive for the first time at Caravan Salon Düsseldorf 2016. This new drive is oriented towards the needs of buyers in the low-cost price segment. The AL-KO entry-level model comes with a EUR 1500 price tag. Naturally, AL-KO has also held this manoeuvring drive to its very high standards. Thus the AL-KO RANGER also meets all the requirements regarding quality and design that the successful MAMMUT premium manoeuvring drive has exhibited for so many years. The design is true to the principle of "form follows function" when it comes to the look as well as the technical aspects. This is because, along with integrated heat dissipation with harmoniously integrated cooling slots, the robust housing also protects the drive motors and the electrical connections. That's why a sealed cable routing is integrated into the housing in order to provide the best possible protection and an appealing look.

The AL-KO RANGER is also characterised by the following points:

- Suitable for nearly all single-axle caravans up to 1.8 tonnes
- AL-KO quality and design
- Maximum climbing power up to 18 %
- Perfect and tested AL-KO CHASSIS connection from Europe's chassis market leader
- Soft start and soft stop
- Button remote control with lanyard
- Global service network with highly trained AL-KO partners
- 5-year warranty (according to AL-KO Warranty Conditions)

Among providers of caravan manoeuvring drives, AL-KO is the proven expert and leading provider who has won multiple awards in this product segment. The engineers of the vehicle technology specialist made the MAMMUT even more flexible and gave it even greater performance on the market as a precise manoeuvring system first in 2015. Because thanks to more and more installation variants being available, now nearly every single axle and tandem caravan can be equipped with this

robust and durable premium manoeuvring system. Retaining the proven reliability throughout all improvements was of particular concern to the developers.

With the manually operated RANGER, AL-KO rounds off its product range and now offers a suitable solution for every need and requirement. The new manoeuvring drive will be available for single axle caravans up to 1.8 tonnes starting in October 2016. The variant for caravans with a tandem axle will follow at the beginning of 2017.
